SCRIPT #01 · SLEEP & SNORING · PUNCHY · 15–30S

The Dry Mouth Wake-Up

HOOK

"You're not sleeping badly. You're breathing wrong."

SCRIPT

Waking up with a dry mouth every morning means you're mouth-breathing all night. That cuts your oxygen intake, spikes your heart rate, and wrecks your sleep quality. NoseFlow opens your nasal valve so you stay nasal all night. First night difference. Guaranteed.

📱 🔗 Link in bio — try it tonight.

SCRIPT #02 · SLEEP & SNORING · EDUCATIONAL · 30

Why You're Tired After 8 Hours

HOOK

"Here's why you wake up exhausted even after a full night's sleep."

SCRIPT

When you breathe through your mouth at night, your body produces less nitric oxide — the molecule that helps your lungs absorb oxygen. Less oxygen absorption means lower sleep quality, even if you're in bed for 8 hours. A nasal dilator gently opens the nasal valve, keeping you breathing through your nose all night. The science is clear: nasal breathing = deeper sleep.

I Didn't Believe It Either

HOOK

"I genuinely didn't think a tiny silicone thing could change how I sleep. I was wrong."

SCRIPT

First night I used NoseFlow I woke up and my mouth wasn't dry. That's never happened. Second night I didn't wake up at 2am. Third night my partner said I didn't snore. It's been three weeks now and I don't know how I slept without it.

SCRIPT #04 · SLEEP & SNORING · PUNCHY · 15–30

Snoring Fix in 3 Seconds

HOOK

"You can stop snoring in literally 3 seconds."

SCRIPT

Snoring happens when your nose can't deliver enough air and your mouth opens to compensate. Throat tissues vibrate. That's the sound. NoseFlow opens the nasal valve, the narrowest point of your airway — instantly. No strips. No sprays. No surgery. Just clearer air.

📱 🔗 In bio. Sleep better tonight.

SCRIPT #05 · SLEEP & SNORING · EDUCATIONAL

The Snoring Science Nobody Explains

HOOK

"Most people treat snoring symptoms. Here's how to treat the cause."

SCRIPT

Snoring is almost always a nasal airflow problem. When your nose is partially blocked — even slightly — you compensate by opening your mouth. Soft throat tissues then vibrate as air passes over them. That's snoring. Internal nasal dilators like NoseFlow address this at the source by widening the nasal valve, keeping airflow through your nose where it belongs. Studies show this reduces snoring events significantly compared to nasal strips.

SCRIPT #06 · MOUTH BREATHING · PUNCHY · 15–30

18% Less Oxygen

HOOK

"Mouth breathing gives you 18% less oxygen. Every breath. All day."

SCRIPT

Your nose produces nitric oxide — a molecule that widens blood vessels and boosts oxygen absorption. Mouth breathing bypasses all of this. If you're a chronic mouth breather, you're running on less oxygen than you should be. NoseFlow helps you stay nasal without even thinking about it.

SCRIPT #07 · MOUTH BREATHING · EDUCATIONAL

What Happens When You Breathe Through Your Mouth

HOOK

"Your nose does six things every breath. Your mouth does zero of them."

SCRIPT

Your nose filters particles, warms cold air, humidifies dry air, produces nitric oxide, activates your parasympathetic nervous system, and creates back pressure that improves oxygen exchange. Your mouth just… lets air in. Chronic mouth breathing is linked to poor sleep, dental decay, anxiety, and even facial structure changes over time. This is why nasal breathing isn't a wellness trend — it's basic biology.

📱 🔗 NoseFlow in bio — start breathing right.

SCRIPT #08 · MOUTH BREATHING · CASUAL · 15–

Are You a Mouth Breather?

HOOK

"Quick test: do you wake up with a dry mouth or chapped lips? You're a mouth breather."

SCRIPT

I was too and had no idea. Turns out most people who mouth breathe don't know they're doing it because it happens at night. The fix is surprisingly simple — just keep your nose open enough to breathe through it. That's literally what NoseFlow does.

📱 🔗 Link in bio. Worth trying.

SCRIPT #09 · MOUTH BREATHING · PUNCHY · 15–

Your Face Is Changing

HOOK

"Mouth breathing is literally changing the shape of your face. Not clickbait."

SCRIPT

Long-term mouth breathers develop what researchers call 'adenoid face' — forward head posture, open mouth resting position, narrowed jaw. It affects adults too. Your airway shapes your anatomy. Nasal breathing keeps your jaw, tongue, and airway in the correct position. Start now.

SCRIPT #10 · MOUTH BREATHING · EDUCATIONAL

The Blood Pressure Connection

HOOK

"A 2024 study found mouth breathing raises blood pressure. Here's why that matters."

SCRIPT

Researchers at the American Journal of Physiology found that mouth breathing raised diastolic blood pressure by 6mmHg and shifted the nervous system toward a stress response — even in completely healthy young adults. The mechanism is simple: nasal breathing activates your parasympathetic system, which calms everything down. Mouth breathing keeps you in a low-level stress state all night long.

SCRIPT #11 · ATHLETIC PERFORMANCE · PUNCHY

22% More Efficient

HOOK

"Nasal-trained runners achieve the same VO2 max using 22% less ventilation."

SCRIPT

That's a Colorado State University study on runners who trained nasal-only for 6 months. Same performance. Way less effort. The reason is CO2 tolerance — nasal breathing builds it, mouth breathing destroys it. More CO2 tolerance means your body releases oxygen to muscles more efficiently. This is why elite athletes are switching.

📱 🔗 NoseFlow — link in bio.

SCRIPT #12 · ATHLETIC PERFORMANCE · CASUAL

I Started Running With It

HOOK

"I started wearing this during my runs and it felt weird for about 3 days. Then something clicked."

SCRIPT

I used to be completely gassed at 5km. Now I'm finishing 10km breathing nasally the whole time. My recovery is faster. I'm not hunched over after sprints anymore. I don't fully understand the science but my body clearly does something different when it's getting the right kind of oxygen.

📱 🔗 Link in bio if you're into this stuff.

SCRIPT #13 · ATHLETIC PERFORMANCE · EDUCATIO

The CO2 Tolerance Secret

HOOK

"The reason you gas out isn't low oxygen. It's low CO2 tolerance."

SCRIPT

Most people think breathlessness means you need more oxygen. Actually it's your body reacting to rising CO2. The more tolerant you are to CO2, the longer and harder you can push before that panic kicks in. Nasal breathing naturally builds this tolerance because the slightly restricted airflow trains your system. It's used by free divers, elite runners, and military special forces. NoseFlow keeps your nasal airway optimally open for training.

SCRIPT #14 · ATHLETIC PERFORMANCE · PUNCHY

The Gym Hack Nobody Talks About

HOOK

"The cheapest performance hack in the gym costs $14.95."

SCRIPT

Nasal breathing during training: more nitric oxide, better oxygen delivery, lower heart rate at same intensity, faster recovery. Mouth breathing during training: none of that. NoseFlow keeps your nasal valve open so you can actually sustain nasal breathing during effort. Used by runners, cyclists, and gym athletes who've figured this out.

📱 🔗 Link in bio.

SCRIPT #15 · ATHLETIC PERFORMANCE · CASUAL

From Sceptic to Convert

HOOK

"I thought nasal breathing during exercise was a gimmick. A physio explained why I was completely wrong."

SCRIPT

She told me the whole point isn't that nose breathing gives you more air — it actually gives you less, which is the point. Your body adapts to use oxygen more efficiently. Within a few weeks of nasal training your VO2 max improves, your heart rate drops, and your endurance goes up. NoseFlow just makes the mechanical side easier — your nasal valve is naturally narrow and restricts airflow when you need it most.

📱 🔗 Try it — link in bio.

SCRIPT #16 · PRODUCT DEMO · CASUAL · 15–30S

Look How Small This Is

HOOK

"This tiny thing changed how I breathe. Let me show you."

SCRIPT

[Hold up dilator between fingers] It's smaller than you think. Soft medical-grade silicone. You roll it slightly, place it just inside your nostril, and it gently pushes outward. [Demonstrate] You feel it open up immediately. It's not uncomfortable — within two minutes you forget it's there. But your airflow doesn't.

📱 🔗 NoseFlow — link in bio. Two sizes, three colours.

SCRIPT #17 · PRODUCT DEMO · PUNCHY · 15–30

Before and After Breathing

HOOK

"Take a breath right now. [pause] Now imagine 40% more air. That's what this does."

SCRIPT

[Hold product to camera] Medical-grade silicone. Fits inside your nose. Gently expands the nasal valve — the narrowest part of your airway. Instant airflow improvement. Reusable, washable, comes with a case. No drugs, no strips, no adhesive. Just better breathing.

📱 🔗 $14.95. Link in bio.

TikTok · Reels · Copy

SCRIPT #18 · PRODUCT DEMO · EDUCATIONAL · 30

How It Actually Works

HOOK

"Here's the anatomy of why nasal dilators work — and why most people use them wrong."

SCRIPT

The nasal valve is the narrowest point of your airway — it's responsible for up to 50% of total airway resistance. When you're congested, tired, or simply have narrower anatomy, this valve restricts airflow and forces mouth breathing. An internal dilator like NoseFlow places gentle outward pressure on this valve from inside. [Show insertion] The key is placement — it should sit just inside the nostril, not deep. You should feel resistance relieved immediately.

📱 🔗 Link in bio — Medium fits most people.

SCRIPT #19 · PRODUCT DEMO · CASUAL · 15–3

Honest First Impression

HOOK

"Okay honest first impression — it feels weird for like 90 seconds and then you completely forget it's there."

SCRIPT

I was expecting it to feel like having something shoved in my nose. It doesn't. The silicone is so soft it just kind of… sits there. You breathe in and you notice more air coming through. That's it. That's the whole thing. I wore it to sleep and woke up feeling weirdly refreshed.

📱 🔗 Link in bio. Less than $15.

SCRIPT #20 · PRODUCT DEMO · PUNCHY · 15–30S

Strip vs Dilator

HOOK

"Nasal strips vs nasal dilators. There's actually a winner."

SCRIPT

Strips pull outward on the side of your nose — they work on the outside. Dilators push outward from inside the nasal valve — where the actual restriction is. A 2019 study in Acta Biomedica found internal dilators outperformed Breathe Right strips on sleep quality and snoring. Plus: reusable, no adhesive, doesn't fall off at 3am.

SCRIPT #21 · MORNING ROUTINE · CASUAL · 15–3

My Morning New

HOOK

"My morning used to start with a dry mouth, foggy head, and hitting snooze three times."

SCRIPT

Now I wake up before my alarm, mouth closed, not groggy. I changed one thing — how I breathe at night. The NoseFlow dilator keeps me nasal breathing the whole time I'm asleep. More oxygen, deeper sleep, and I actually want to get up. It sounds too simple but here we are.

📱 🔗 Link in bio.

SCRIPT #22 · MORNING ROUTINE · PUNCHY · 15–

Wake Up Different

HOOK

"What if the reason you feel terrible every morning is something you can fix for $14.95?"

SCRIPT

Dry mouth, headache, groggy, slow — these are mouth breathing symptoms. Your body spent 8 hours running on suboptimal oxygen. NoseFlow fixes that at the source. Open your nasal valve. Breathe right. Wake up actually rested.

📱 🔗 Link in bio. First order, free shipping.

SCRIPT #23 · MORNING ROUTINE · EDUCATIONA

The Morning Brain-Fog Explanation

HOOK

"If you wake up foggy every morning, your nighttime breathing is probably why."

SCRIPT

During deep sleep your body does most of its repair work — and that process requires optimal oxygen delivery. Mouth breathers have lower oxygen saturation during sleep, which means shallower sleep stages, more micro-arousals, and less restorative rest overall. The result: morning fog, slow cognition, low energy. Nasal breathing during sleep maintains oxygen saturation and supports deeper sleep stages. NoseFlow makes this effortless.

SCRIPT #24 · MORNING ROUTINE · CASUAL · 30–60

My Sleep Routine Stack

HOOK

"People ask me what changed my sleep. Honestly it was embarrassingly simple."

SCRIPT

I tried the expensive stuff first. Magnesium glycinate. Blue light glasses. Cold room. All good but none of it was the thing. The thing was this tiny silicone piece that keeps my nose open while I sleep. I was a chronic mouth breather. Fixing that fixed everything else. Now my sleep stack is: NoseFlow, consistent wake time, dark room. That's it. Three things.

📱 🔗 Link in bio. Give it a week.

SCRIPT #26 · RELATIONSHIP · CASUAL · 15–30S

My Partner Made Me Buy This

HOOK

"My partner was about to make me sleep in the other room."

SCRIPT

Apparently my snoring was truly something else. I tried everything — different pillows, sleeping position, even those nasal strips which fell off by 3am. A mate told me to try an internal nasal dilator. Three nights later my partner said I barely made a sound. We're still sharing a bed. NoseFlow literally saved my relationship. Slight exaggeration. Slight.

SCRIPT #27 · RELATIONSHIP · PUNCHY · 15–30S

Gift This to a Snorer

HOOK

"If your partner snores — this is the gift they don't know they need."

SCRIPT

Snoring is a nasal airflow problem in most cases. When the nose can't deliver enough air, the mouth opens, throat vibrates, chaos ensues. NoseFlow fixes the source. Buy it for them. Tell them it's for their health. Don't mention you just want to sleep.

📱 🔗 Link in bio. Ships fast.

SCRIPT #28 · RELATIONSHIP · CASUAL · 30–60S

She Bought It For Me

HOOK

"My girlfriend sent me a link with no message. Just the link. I knew what she was saying."

SCRIPT

I'd been snoring for years. Told myself it wasn't that bad. She finally just sent me this product — NoseFlow nasal dilator — and left it at that. I figured I'd try it to make her happy. First night: she said the snoring stopped. Second night: she actually slept through. Third night: she ordered a second one for herself because apparently she snores too and I'd never told her. We both sleep with them now.

📱 🔗 Link in bio — couples discount if you buy two.

TikTok · Facebook · Copy

SCRIPT #29 · RELATIONSHIP · PUNCHY · 15–30S

Cheaper Than Couples Therapy

HOOK

"Bad sleep makes people irritable. Snoring causes bad sleep. NoseFlow costs $14.95."

SCRIPT

Sleep deprivation increases cortisol, reduces emotional regulation, and makes people harder to be around. If one person in a couple is snoring, both people are sleep deprived. Both are more irritable. Fix the root cause. One small silicone device. Both of you sleep better. Everyone wins.

📱 🔗 Link in bio.

TikTok · Reels · Copy

SCRIPT #30 · RELATIONSHIP · EDUCATIONAL · 30

Why Snoring Destroys Sleep For Both of You

HOOK

"Your partner's snoring isn't just annoying — it's genuinely damaging your sleep."

SCRIPT

Studies show bed partners of snorers lose an average of one full hour of sleep per night. Over a year that's 365 hours — equivalent to 45 lost nights. Sleep deprivation accumulates, affecting mood, cognition, immune function, and relationship quality. The snorer is usually unaware because snoring typically doesn't wake the snorer. Treating the snorer's nasal airflow treats both of you. NoseFlow addresses the root cause rather than the symptom.
